New Policy Alert related to ICT Accessibility

Did you know that the digital content you may work on can reach far beyond our campuses? As such, it is important that we understand and implement accessibility principles in every aspect of our digital communication.

As part of its commitment to accessibility, the University of Connecticut recently adopted the new Information and Communication Technology (ICT) Accessibility Policy. The purpose of this policy is to set expectations that digital information, communication, content, and technology be designed, developed, and procured to be accessible to people with disabilities.

Policy Applicability

Providing an accessible information, communication, content, and technology experience for people with disabilities is the responsibility of all University administrators, faculty, staff, students and those who maintain externally facing University websites.
